Hello,

I am a graduate student from the University of Helsinki, Finland. I am doing my Msc thesis on phytoplankton (freshwater) concentrating mainly on phytoplankton counting methods. I was wondering if it'd be possible to get  
o a copy (electric/paper) of the following report (and any other which tells something on your methods you are using when counting/analysing plankton samples).

Soil & Water Conservation Society of Metro Halifax. 1993. Phytoplankton assemblages in 21 Halifax Metro lakes (Phase-B3 Limnology project), Nov. 1993. x, 120 p.: ill., maps.  
o (Beaverbank, Bissett, Chezzetcook, Coks, Cranberry, Echo, First, Five Island, Fletcher, Henry, Hubley Big, Hubley Mill, Kinsac, Lewis, Loon, Petpeswick, Porters-Upper & Lower, Settle, Springfield, Stillwater, and Third)

Best regards
