Subject: Lake Data Archives

Hello,

My name is Catherine Galbrand. I am a graduate student with the School for Resource and Environmental Studies at Dal. For my thesis, I am currently involved in a leachate treatment wetland project in Dartmouth. The wetland is located at the head of Wright's Brook, a 4.6 km system which traverses through Enchanted and Flat lakes as well as several wetlands before discharging into the harbour. The cells were established last spring and I spent the summer establishing the vegetation. This spring/summer, I will continue to patch up some bare areas as well as start in on water quality monitoring. I have been considering doing benthic macroinvertebrate sampling and so was reading one of your papers when I decided to check out your webpage, where I spotted your Lake Data Archives page. I would love to get a look at those archives for some baseline data on Enchanted and Flat lakes! The visual degradation as a result of the leachate input is dramatic but we have no quantitative data. How could I go about getting a peek at this info??

Catherine
