Subject: McIntosh Run

Hello,

my name is Victoria Sheppard and I am currently a Master's of Environmental Studies student at Dalhousie. I got your contact information from Walter Regan of the Sackville Rivers Association.

As part of our summer course, two colleagues and I have begun working on developing a Watershed Management Plan for the McIntosh Run Watershed Association. I am specifically focusing on fish in the Run, and therefore am looking for any information or data on the Run's historic and/or present fish populations (both species type and numbers). As well, I am examining the specific requirements needed to bring the fish population back up to historical numbers; what restoration efforts does this depend on and which would be most successful? It would also be helpful to know what work has already been accomplished on this subject.

I'd really appreciate any information you could pass my way, or the name and contact information of other people you think could possibly help!

Thank you very much for your time,

Victoria
